## Chimchar

Domain: Eukarya  
Kindom: Animalia  
Phylum: Chordata  
Class: Mammalia  
Order: Primates  
Family: Hominidae  
Genus: Simiae  
Species: Calidi

Chimcar is a type of chimpanzee that could be found in rocky mountains. Chimpanzees in general are all eukaryotes due to the fact that they all have cell nucleuses. Chimcar is classified in the animalia kingdom because they reproduce sexually, are not able to produce their own food, and many others. A tailbone is also present on the body of chimcar, making it classified as part of the chordate. Chimcar has mammary glands which means they are part of the mammalia class. Chimcars have 5 fingers meaning they are primates and lastly, Chimcar is a part of the ape family, making them classified as a hominidae.

Simiae, the genus of this organism, is a latin word that translates into ape. The species of this animal is Calidi, which translates to hot due to the tail of this animal being made of fire.
